# RZR XP 900/1000 Premium Horn Kit
With Carling Lit Switch

Thank you for purchasing XTC Power Products Horn Kit.
For more details on installation go to   www.xtcinstall.com .

Please read the instructions fully and familiarize yourself with the components before starting the install.

1. Remove hood, dash cover.
2. Remove bolt from radiator support and mount the horn.

3. Attach the Power and Ground wire to the horn.
4. Run the switch connector through the fire wall to the dash.

   WARNING! Verify that there is clearance behind dash for switch.

5. Using the switch mount as a template, mark, drill and cut out rectangle. Install switch mount and run wires through mount and attach to switch and insert switch in mount.

6. Run the Ground and Power wire to the factory Busbar, attach the fused wire to the 12vdc accessory stud under the hood, and the ground wire to the ground stud.
(Note: 2015 up RZR XP's do not have a ground hooked on any of the studs under the hood – it only offers keyed 12vdc. You must run a ground wire from the chassis to the ground stud or run our black ground wire directly to the chassis ground, you may remove one of the busbar screw mounts for ground)

7. Verify operation of Horn. Cable tie any extra harness under dash and hood.

For more details on installation go to www.xtcinstall.com . We can also be reached at Support@xtcpowerproducts.com. Please visit our website at www.xtcpowerproducts.com
